1. Do state maintenance crews do any painting of steel bridges?

☐ Dedicated crews

☐ Routinely

☒ Occasionally

☐ Infrequently

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

the majority of our painting is to cover up graffiti

2. About how long have the crews been painting?

☐ Less than 5 years

☐ More than 15 years

☒ Less than 15 years

☐ Dropped the program

☐ Other:

When:

3. What level of preparation does your state crews do before painting?

☐ SP-2

☐ SP-3

☐ SP-6

☒ Other:none

Is washing done as part of preparation?

☐ Yes

☒ No

Please provide a brief description of the equipment used.

4. What is the aim or strategy of using state crews for painting steel bridges?
- ☐ Extend coating service life
 - ☐ Provide some protection between painting contracts
 - ☐ Prompted by repair work in vicinity
 - ☒ Other: cover up graffiti
5. Are the crews used just for spot painting, girder end areas, or the entire bridge?
spot
6. What type(s) of coatings are the crews using?
- ☐ Calcium Sulfonate ☐ Epoxy Mastic ☐ Urethane Mastic
 - ☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd
 - ☐ Polyaspartic ☐ Moisture Cure Urethane
 - ☒ Other: water base paint

Please provide the manufacturer(s) and product name(s) of the coatings.
vri

7. Application methods use by the crews?
- ☒ Spray ☒ Roller ☐ Brush
 - ☐ Other:
8. How is the success of the strategy measured?
- ☐ Anecdotal ☐ Anecdotal with some quantitative results
 - ☒ Quantitative results ☐ Research study
 - ☐ Other: Please indicate criteria

Please provide documents, links, or references to supporting information.
work orders

9. How is the effectiveness of the coatings measured?

☐ Anecdotal

☐ Field testing

☐ Lab tests

☐ Research study

☒ Other: Please indicate criteria none

10. If it was your decision, what paint would you recommend for the crews to use?
water base

11. Has the agency developed guidance or documentation on their maintenance of
steel coatings? no

none

SURVEY on MAINTENANCE OF STEEL COATINGS

Name Steven Sibley

State LA

Position Bridge Inspection QA\QC Engineer

E-mail steven.sibley@la.gov

1. Do state maintenance crews do any painting of steel bridges?

- | | |
|--|--|
| <input type="checkbox"/> Dedicated crews | <input type="checkbox"/> Routinely |
| <input type="checkbox"/> Occasionally | <input checked="" type="checkbox"/> Infrequently |

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

LA DOTD does not have a formal painting program yet. Bridge Maintenance is working to establish one. At one point in history LA DOTD had dedicated statewide crews as well as district crews that could and did perform maintenance painting (pressure wash & overcoat, spot paint, etc.). These crews have dwindled through attrition and now only a couple districts have painting crews that perform this type of work infrequently. There is no longer a statewide paint crew.

2. About how long have the crews been painting?

- | | |
|---|---|
| <input type="checkbox"/> Less than 5 years | <input checked="" type="checkbox"/> More than 15 years |
| <input type="checkbox"/> Less than 15 years | <input checked="" type="checkbox"/> Dropped the program |
| <input type="checkbox"/> Other: | When:lost through attrition over the |
- past 10 years.

3. What level of preparation does your state crews do before painting?

- | | | |
|---|--|-------------------------------|
| <input checked="" type="checkbox"/> SP-2 | <input checked="" type="checkbox"/> SP-3 | <input type="checkbox"/> SP-6 |
| <input checked="" type="checkbox"/> Other:Pressure wash (2000 - 3000 psi) | | |

Is washing done as part of preparation?

☒ Yes

☐ No

Please provide a brief description of the equipment used.

4. What is the aim or strategy of using state crews for painting steel bridges?

☒ Extend coating service life

☒ Provide some protection between painting contracts

☐ Prompted by repair work in vicinity

☐ Other:

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?
mostly spot, girder end areas, but also entire small bridges (depends on access and other site conditions).

6. What type(s) of coatings are the crews using?

☐ Calcium Sulfonate

☐ Epoxy Mastic

☐ Urethane Mastic

☐ Acrylic elastomer

☐ Epoxy Amine

☒ Oil Alkyd

☐ Polyaspartic

☐ Moisture Cure Urethane

☐ Other:

Please provide the manufacturer(s) and product name(s) of the coatings.

Historically we have used a Mil. Spec (MS-285) and purchased from various manufacturers. We also now have a QPL for other overcoating systems that is comprised of mostly MC Urethanes, but also includes some Epoxy Mastics.

7. Application methods use by the crews?

☒ Spray

☒ Roller

☒ Brush

☐ Other:

8. How is the success of the strategy measured?

- ☒ Anecdotal ☐ Anecdotal with some quantitative results
☐ Quantitative results ☐ Research study
☐ Other: Please indicate criteria

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- ☒ Anecdotal ☐ Field testing
☐ Lab tests ☐ Research study
☐ Other: Please indicate criteria

10. If it was your decision, what paint would you recommend for the crews to use?
Most likely one of the systems from QPL 79, but the MS-285 system is very application friendly, but requires more man-hrs to complete.

11. Has the agency developed guidance or documentation on their maintenance of steel coatings? Not yet. Is being developed as part of the redevelopment of a program.

12. Additional Comments:

SURVEY on MAINTENANCE OF STEEL COATINGS

Name David Crumley

State Montana

Position Bridge Maintenance Engineer

E-mail dcrumley@mt.gov

1. Do state maintenance crews do any painting of steel bridges?

- | | |
|--|--|
| <input type="checkbox"/> Dedicated crews | <input type="checkbox"/> Routinely |
| <input type="checkbox"/> Occasionally | <input checked="" type="checkbox"/> Infrequently |

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

As a result of our relatively benign environment in MT, we have to do very very little painting on existing bridges, whether through contract or in-house maintenance. We have only contracted out a handful of painting projects (either full or spot) on existing bridges in Montana during the last 10 years. So, even though we do tiny amounts of "painting" through our maintenance/inspection guys, it still may be a large percentage of the total painting done.

2. About how long have the crews been painting?

- | | |
|---|--|
| <input type="checkbox"/> Less than 5 years | <input type="checkbox"/> More than 15 years |
| <input type="checkbox"/> Less than 15 years | <input type="checkbox"/> Dropped the program |
| <input checked="" type="checkbox"/> Other: no bridge paint crew | When: |

3. What level of preparation does your state crews do before painting?

- | | | |
|---|-------------------------------|-------------------------------|
| <input type="checkbox"/> SP-2 | <input type="checkbox"/> SP-3 | <input type="checkbox"/> SP-6 |
| <input checked="" type="checkbox"/> Other: essentially none - blow or wipe dust/dirt off. | | |

Is washing done as part of preparation?

- | | |
|------------------------------|--|
| <input type="checkbox"/> Yes | <input checked="" type="checkbox"/> No |
|------------------------------|--|

Please provide a brief description of the equipment used.

4. What is the aim or strategy of using state crews for painting steel bridges?

- ☐ Extend coating service life
- ☐ Provide some protection between painting contracts
- ☐ Prompted by repair work in vicinity
- ☒ Other: spot overcoat vulnerable areas

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?
Only spot painting, usually the bearings or the girder ends

6. What type(s) of coatings are the crews using?

- ☐ Calcium Sulfonate ☐ Epoxy Mastic ☐ Urethane Mastic
- ☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd
- ☐ Polyaspartic ☐ Moisture Cure Urethane
- ☒ Other: Zinc-rich "cold galvanizing" paint from a spray can

Please provide the manufacturer(s) and product name(s) of the coatings.
various

7. Application methods use by the crews?

- ☐ Spray ☐ Roller ☐ Brush
- ☒ Other: off the shelf paint from a spray can

8. How is the success of the strategy measured?

- ☒ Anecdotal ☐ Anecdotal with some quantitative results
- ☐ Quantitative results ☐ Research study
- ☐ Other: Please indicate criteria

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- | | |
|--|---|
| <input checked="" type="checkbox"/> Anecdotal | <input type="checkbox"/> Field testing |
| <input type="checkbox"/> Lab tests | <input type="checkbox"/> Research study |
| <input type="checkbox"/> Other: Please indicate criteria | |

10. If it was your decision, what paint would you recommend for the crews to use?

11. Has the agency developed guidance or documentation on their maintenance of steel coatings? No, other than we just don't do (properly prepared and planned) in-house painting because of lead issues (i.e. all of the training, equipment, containment, and monitoring necessary when dealing with the proper preparation of old lead paint) and because we don't have much of a need for painting (see No. 1 above).

12. Additional Comments:

Much of our spot painting that is done, is done by our inspectors while inspecting a bridge. They just keep a small supply of spray cans on hand and give the bearings or girder ends a quick shot of paint on spot areas that may need it. Very minimal prep. We have no formal or organized, in-house, paint maintenance program.

SURVEY on MAINTENANCE OF STEEL COATINGS

Name Richard Thompson

State Virginia

Position Bridge Management Engineer

E-mail richard.thompson@VDOT.Virginia.gov

1. Do state maintenance crews do any painting of steel bridges?

- | | |
|--|--|
| <input type="checkbox"/> Dedicated crews | <input type="checkbox"/> Routinely |
| <input type="checkbox"/> Occasionally | <input checked="" type="checkbox"/> Infrequently |

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

Only one district out of nine has their bridge crew paint bridges. Less than 5% of that district's program is used for painting bridges.

2. About how long have the crews been painting?

- | | |
|---|---|
| <input type="checkbox"/> Less than 5 years | <input checked="" type="checkbox"/> More than 15 years |
| <input type="checkbox"/> Less than 15 years | <input checked="" type="checkbox"/> Dropped the program |
| <input type="checkbox"/> Other: | |

All but one district has dropped the program due to environmental requirements and the remaining district may not be doing much longer.

3. What level of preparation does your state crews do before painting?

- | | | |
|--|-------------------------------|-------------------------------|
| <input checked="" type="checkbox"/> SP-2 | <input type="checkbox"/> SP-3 | <input type="checkbox"/> SP-6 |
| <input type="checkbox"/> Other: | | |

Please provide a brief description of the equipment used.

4. What is the aim or strategy of using state crews for painting steel bridges?

- ☐ Extend coating service life
- ☐ Provide some protection between painting contracts
- ☒ Prompted by repair work in vicinity
- ☐ Other:

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?
What painting is performed is usually done on repair work.

6. What type(s) of coatings are the crews using?

- ☐ Calcium Sulfonate ☐ Epoxy Mastic ☐ Urethane Mastic
- ☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd
- ☐ Polyaspartic ☐ Other:

Please provide the manufacturer(s) and product name(s) of the coatings.

One district has begun using several corrosion inhibitors (Black Max is one) for spot painting around repaired areas. If it works out other districts will use as well.

7. Application methods use by the crews?

- ☒ Spray ☒ Roller ☒ Brush
- ☐ Other:

8. How is the success of the strategy measured?

- ☒ Anecdotal ☐ Anecdotal with some quantitative results
☐ Quantitative results ☐ Research study
☐ Other:

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- ☒ Anecdotal ☐ Field testing
☐ Lab tests ☐ Research study
☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

SURVEY on MAINTENANCE OF STEEL COATINGS

Name Ivan Silbernagel

State Oregon

Position Structure Coatings Engineer

E-mail Ivan.P.SILBERNAGEL@odot.state.or.us

1. Do state maintenance crews do any painting of steel bridges?

- ☐ Dedicated crews ☐ Routinely
☐ Occasionally ☒ Infrequently

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

Less than 1%. State forces have only been doing some smaller collision damage work until recently. They have started to do some cleaning and spot painting.

2. About how long have the crews been painting?

- ☒ Less than 5 years ☐ More than 15 years
☐ Less than 15 years ☐ Dropped the program
☐ Other:

3. What level of preparation does your state crews do before painting?

- ☐ SP-2 ☒ SP-3 ☐ SP-6
☐ Other:

Please provide a brief description of the equipment used.

Needle gun, power wire wheels and discs. Sometimes with vacuum shrouds.

4. What is the aim or strategy of using state crews for painting steel bridges?

☒ **Extend coating service life**

☐ Provide some protection between painting contracts

☐ Prompted by repair work in vicinity

☐ Other:

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

Only spot painting

6. What type(s) of coatings are the crews using?

☐ Calcium Sulfonate

☐ Epoxy Mastic

☐ Urethane Mastic

☐ Acrylic elastomer

☐ Epoxy Amine

☐ Oil Alkyd

☐ Polyaspartic

☒ **Other: Moisture cured Urethane**

Please provide the manufacturer(s) and product name(s) of the coatings.

Wasser – mio-zinc/mc-zinc, mio-mastic/ferrox b, and ferrox a/ mc-luster

Sherwin-Williams – zinc primer/corothane 1 galvapak, ironox b, ironox a

Zero Rust & cold galvanizing – very small temp patches

7. Application methods use by the crews?

☐ Spray

☐ Roller

☐ Brush

☒ **Other: all methods but mostly brush**

8. How is the success of the strategy measured?

☐ Anecdotal

☒ **Anecdotal with some quantitative results**

☐ Quantitative results

☐ Research study

☐ Other:

Please provide documents, links, or references to supporting information.

We have postponed several full maintenance painting projects 5+ years by doing some cleaning and spot painting.

9. How is the effectiveness of the coatings measured?

☒ Anecdotal

☐ Field testing

☐ Lab tests

☐ Research study

☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

It depends on the structure type and environment. Single component moisture cured urethanes are user friendly and can be applied with little or no containment/environmental controls. Surface tolerant zinc primers (i.e Corothane 1 zinc primer #B65A15 or Wasser Mio-zinc) work well for tool prepped surfaces. Any of the MCU intermediate and topcoats mentioned above can be used. Coal tars work well for immersion use, but they need better surface prep than tool cleaning. Coal tars are carcinogens so their use is very limited.

11. Additional comments: ODOT has traditionally waited until the coating system needed full removal before doing any coatings work. Our maintenance crews did almost no coating maintenance because of lead and chromate issues. We are now doing some cleaning and spot painting. On coastal bridges, spot painting can add a few years to the coating systems life. On structures away from the coast, it can easily add 10 years to the coating system life.

Farrell Calhoun in Memphis, TN
1024 Rust Stop red Primer (oil base)

7. Application methods use by the crews?
- ☒ Spray ☐ Roller ☐ Brush
 - ☐ Other:

8. How is the success of the strategy measured?

- ☐ Anecdotal ☐ Anecdotal with some quantitative results
- ☐ Quantitative results ☐ Research study
- X Other: Visual bridge inspection

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- ☐ Anecdotal ☐ Field testing
- ☐ Lab tests ☐ Research study
- X Other: Visual bridge inspection

10. If it was your decision, what paint would you recommend for the crews to use?

Bridge crews painted a few entire bridges several years ago, but dropped the program due to the time involved, work load of bridge repair, etc. Their painting now is limited to repaired areas of beams, new piles, pile repair or bearings. In the bridge crew's experience, the oil base stays on better than water base.

Additional comments: We have a few bridges repainting contracts each year.

G	*Foliage green over red lead with beam ends (or parts of beams) painted with coal tar epoxy
H	Foliage green (ALKYD) over zinc by Bridge Maintenance
I	Inorganic zinc (IOZ) primer and acrylic top coats
L	*Aluminum over red lead with beam ends (or parts of beams) painted with coal tar epoxy
M	Coal tar epoxy over zinc
T	Weathering steel with beam ends painted with water based acrylic (brown in color)
U	Unknown
V	Green vinyl over zinc (Contract let early 1975)
W	Weathering steel
X	Green vinyl over red primer nonwaterbase (ALKYD) (Contracts let 1991)
Y	Green waterbased (Acrylic) over red waterbased primer (Acrylic) since 1993 used by Bridge Maintenance
Z	Unpainted (Not weathering steel)

PAINT SYSTEM DESCRIPTION				
Paint	Approx. Period of Use	Color	Other Characteristics Used for Identification	Comments
Aluminum	All Years	Silver		
Foliage Green	Late 1960's to Mid 1970's	Green	Chalks Heavily, Fades	
Aluminum Pigmented Coal Tar Epoxy	Early to Mid 1970's	Silver	Tends to bronze when exposed	Known to have ben used on Elizabeth City bascule
Vinyl	After 1975	Green	Does not chalk	
Epoxy	Late 1960's	Light tan	Chalks, Fades, Very hard	Only used on Lift span at Wilmington
Coal Tar Epoxy	After Mid 1960's	Black or Red	Very hard	1. Has been used for maintenance painting at ends of beams
				2.Coal tar epoxy over zinc was used at Oregon Inlet and Carolina Beach
Red Lead	All Years	Reddish Orange	Primer	
Zinc	Late 1960's	Light Green or Gray	Very hard, Rough, Primer	
White Lead	Before Mid 1960's	White	Finished coat chalks, Will darken and turn black if exposed to sulfide gas	Color is generally white, but can be tinted to any shade of gray. Known to have been used on some Forest Service bridges

SURVEY on MAINTENANCE OF STEEL COATINGS

Name Jeff C. Vigil
State New Mexico

Position Bridge Management

E-mail jeff.vigil@state.nm.us

1. Do state maintenance crews do any painting of steel bridges?

- ☐ Dedicated crews ☐ Routinely
☐ Occasionally <*> Infrequently

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

NMDOT has extremely limited painting program. Painting of steel members is rarely performed. New Mexico's hot and arid climate allows for this.

2. About how long have the crews been painting?

- ☐ Less than 5 years ☐ More than 15 years
☐ Less than 15 years ☐ Dropped the program
<*> Other: Very limited

3. What level of preparation does your state crews do before painting?

- ☐ SP-2 ☐ SP-3 ☐ SP-6
<*> Other:

Please provide a brief description of the equipment used.

4. What is the aim or strategy of using state crews for painting steel bridges?

☒ Extend coating service life

☐ Provide some protection between painting contracts

☐ Prompted by repair work in vicinity

☐ Other: [Aesthetics](#)

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

[On preventative maintenance jobs, spot painting is usually performed.](#)

[On beautification projects, entire bridge is usually painted.](#)

6. What type(s) of coatings are the crews using?

☐ Calcium Sulfonate ☒ Epoxy Mastic ☒ Urethane Mastic

☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd

☐ Polyaspartic ☐ Other:

Please provide the manufacturer(s) and product name(s) of the coatings.

7. Application methods use by the crews?

☒ Spray

☒ Roller

☒ Brush

☐ Other:

8. How is the success of the strategy measured?

- ☐ [<*>](#) Anecdotal ☐ Anecdotal with some quantitative results
☐ Quantitative results ☐ Research study
☐ Other:

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- ☐ [<*>](#) Anecdotal ☐ Field testing
☐ Lab tests ☐ Research study
☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

11. Additional comments:

New Mexico has a hot and arid climate. As a result, the rate of corrosion of steel members is very low. Painting of steel members is not really required except for areas that are affected by salt runoff from the roadway. Painting of steel members (in New Mexico) is of limited importance as required to preserve the structural life of a bridge.

SURVEY on MAINTENANCE OF STEEL COATINGS

Name _____ Bob Fura _____

State _____ RI _____

Position ____ Chief Civil Engineer/Bridge Eng. ____

E-mail _____ rfura@dot.ri.gov _____

1. Do state maintenance crews do any painting of steel bridges?

- ☐ Dedicated crews ☐ Routinely
☐ Occasionally ☐ **Infrequently**

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

RIDOT does not perform any painting with state forces

2. About how long have the crews been painting?

- ☐ Less than 5 years ☐ More than 15 years
☐ Less than 15 years ☐ Dropped the program
☐ Other: **RIDOT has never had a painting program using state forces**
Separate painting contracts have rarely been put out, painting
is only done when a bridge is rehabilitated and is often
excluded due to funding

3. What level of preparation does your state crews do before painting?

- ☐ SP-2 ☐ SP-3 ☐ SP-6
☐ Other: **Varies with type of coating, SSPC SP10, SP11, SP12**

Please provide a brief description of the equipment used.

Surface prep is typically by abrasive shot blasting to SSPC SP10

Not familiar with what equipment is used as any and all painting is contracted out

4. What is the aim or strategy of using state crews for painting steel bridges?

- ☐ Extend coating service life
- ☐ Provide some protection between painting contracts
- ☐ Prompted by repair work in vicinity
- ☐ Other: **N/A**

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

If we do paint, usually only the ends of beams and the fascia beams

6. What type(s) of coatings are the crews using?

- ☐ **Calcium Sulfonate**
- ☐ Epoxy Mastic
- ☐ **Urethane Mastic**
- ☐ Acrylic elastomer
- ☐ Epoxy Amine
- ☐ Oil Alkyd
- ☐ Polyaspartic
- ☐ Other:

Please provide the manufacturer(s) and product name(s) of the coatings.

CPC Corp

Chemotex Bridgecote 4100

7. Application methods use by the crews?

- ☐ **Spray**
- ☐ Roller
- ☐ Brush
- ☐ Other:

8. How is the success of the strategy measured?

| <input type="checkbox"/> SP-2 | <input type="checkbox"/> SP-3 | <input type="checkbox"/> SP-6 |
|-------------------------------|-------------------------------|-------------------------------|

X Other: Cleaning for spot, zone and overcoat requires localized solvent cleaning to SP-1, followed by complete high pressure water cleaning to SP-12 (WJ-4) with nozzle pressures between 4000-6000 psi, and then power tool / hand tool cleaning to SP-2/3. Hand tool cleaning is permitted only in areas that are inaccessible for power tool cleaning.

Please provide a brief description of the equipment used. Contractor uses whatever equipment is appropriate for the job.

4. What is the aim or strategy of using state crews for painting steel bridges?

- | |
|---|
| <input type="checkbox"/> Extend coating service life |
| <input type="checkbox"/> Provide some protection between painting contracts |

☐ Prompted by repair work in vicinity

☐ Other:

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

6. What type(s) of coatings are the crews using?

☐ Calcium Sulfonate ☐ Epoxy Mastic ☐ Urethane Mastic

☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd

☐ Polyaspartic ☐ Other:

Spot Paint System

Coat 1- Penetrating sealer

Coat 2- Aluminum filled epoxy mastic

Coat 3- Aliphatic urethane

Zone and Overcoat Paint System

Coat 1- Penetrating sealer

Coat 2- Micaceous iron oxide, aluminum filled MCU

Coat 3- Micaceous iron oxide, MCU

Coat 4- Aliphatic Urethane

Please provide the manufacturer(s) and product name(s) of the coatings. All our paint projects are advertised, but Sherwin Williams and Carboline products are used most.

7. Application methods use by the crews?

☒ Spray

☐ Roller

☐ Brush

☒ Other: Brushes, rollers or daubers are only used adjacent to machinery, in inaccessible areas and for applying stripe coats.

8. How is the success of the strategy measured?

☒ Anecdotal

☐ Anecdotal with some quantitative results

☐ Quantitative results

☐ Research study

☐ Other:

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

☒ Anecdotal

☐ Field testing

☐ Lab tests

☐ Research study

☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

Our best performing paint system is our system for complete paint:

Complete Paint System

Coat 1- Organic zinc

Coat 2- Epoxy polyamide

Coat 3- Aliphatic urethane

With a surface preparation consisting of:

Localized solvent cleaning to SP-1, followed by low pressure water cleaning to SP-12 with a nozzle pressure of 2000-2500 psi and then complete abrasive blast cleaning to near white metal SP-10.

11. Additional comments:

We've found that paint system performance depends more on surface preparation than the materials used, and we only overcoat if existing paint system has:

DFT between 7 and 20 mils

Pull off test results in 200 psi minimum adhesive/cohesive tensile strength.

SURVEY on MAINTENANCE OF STEEL COATINGS

1. Do state maintenance crews do any painting of steel bridges?

☒ Dedicated crew

☐ Routinely

☒ Occasionally

☐ Infrequently

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

The state may spend around 3 million/yr on painting of which 10% of that may be by state forces. There is no set amount.

2. About how long have the crews been painting?

☐ Less than 5 years

☒ More than 15 years

☐ Less than 15 years

☐ Dropped the program

☐ Other:

3. What level of preparation does your state crews do before painting?

☐ SP-2

☐ SP-3

☐ SP-6

☒ Other: Pressure wash – 3000 psi

Please provide a brief description of the equipment used.

Pressure washer

Tarps for catching wash off

4. What is the aim or strategy of using state crews for painting steel bridges?

☒ Extend coating service life

☐ Provide some protection between painting contracts

☒ Prompted by repair work in vicinity

☐ Other:

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

Repair crews – spot painting and end areas

The statewide paint crew will paint an entire bridge

6. What type(s) of coatings are the crews using?

☒ Calcium Sulfonate ☐ Epoxy Mastic ☐ Urethane Mastic

☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd

☐ Polyaspartic ☐ Other:

Please provide the manufacturer(s) and product name(s) of the coatings.

Watson Coating, Armor-Shield 8106

7. Application methods use by the crews?

☒ Spray ☐ Roller ☒ Brush

☐ Other:

8. How is the success of the strategy measured?

☒ Anecdotal ☐ Anecdotal with some quantitative results

☐ Quantitative results ☐ Research study

☐ Other:

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

☒ Anecdotal

☐ Field testing

☐ Lab tests

☐ Research study

☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

Calcium Sulfonate for our maintenance crews will remain our main overcoating for the foreseeable future.

We are looking at a moisture cured urethane aluminum coating for certain spot locations

11. Additional comments:

If funding was available we would like to let more paint contracts

☒ Quantitative results ☐ Research study
☐ Other:

Please provide documents, links, or references to supporting information.

California DOT engineers perform element level inspection during every routine inspection. The element level inspection data for painted steel elements is used to calculate the paint condition index (pci) for every painted steel bridge. When the pci drops to 65 or lower, a painting work recommendation is triggered.

9. How is the effectiveness of the coatings measured?

☐ Anecdotal

☒ Field testing

☒ Lab tests

☐ Research study

☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

In California our choices are limited by stringent environmental constraints regarding VOCs. Most of the paints that meet our environmental requirements are the waterborne paints.

11. Additional comments:

One of our biggest bridge painting concerns is coating inspection on both in-house and contract paint projects. Our Program is currently looking into options to improve the staff's coating inspection expertise.

State: Missouri

Position: State Bridge Maintenance Engineer

E-mail: scott.stotlemeyer@modot.mo.gov

1. Do state maintenance crews do any painting of steel bridges?

☒ Dedicated crews

☒ Routinely

☒ Occasionally

☐ Infrequently

See explanation below.

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

MoDOT's Central Office Bridge Maintenance section had four 6-person crews dedicated to bridge painting statewide. However, we are undergoing a reorganization effort in which those resources are being combined with those of our five dedicated statewide repair crews to create eight regional crews responsible for all bridge maintenance items, including bridge painting, within an area. With the change in scope of work, each regional crew will paint on a more seasonal and cyclical nature.

State forces have performed, and will continue to perform, the bulk of the bridge maintenance painting in the rural areas. Contract painting is typically used only in the metropolitan areas (i.e., Kansas City and St. Louis), on rehabs, and on major bridges.

As a comparison, state forces painted 149 bridges and we let 48 bridges to be painted by contract from January 2007 through September 2008.

2. About how long have the crews been painting?

☐ Less than 5 years

☐ More than 15 years

☐ Less than 15 years

☐ Dropped the program

X Other:

While experience on our dedicated paint crews varied based on the experience of the individual crew members, the crews had been established for many (>15) years. Under regionalization, the crews' and crew members' experience with bridge painting will reduce, as they will be painting less frequently on the average (e.g., 9 crews vs. 4 crews).

3. What level of preparation does your state crews do before painting?

X SP-2

X SP-3

☐ SP-6

☐ Other:

Please provide a brief description of the equipment used.

Due to waste (e.g., lead) containment/disposal issues, our state forces only use needle scalers, putty knives, and wire brushes to prepare the existing substrate for paint.

4. What is the aim or strategy of using state crews for painting steel bridges?

☐ Extend coating service life

☐ Provide some protection between painting contracts

☐ Prompted by repair work in vicinity

X Other:

The MoDOT in-house paint program is in catch-up mode. We are not yet in a preventative maintenance mode where we are able to extend the life of the bridge by proactively programming painting needs. Instead, our primary focus is on cleaning and protecting exposed steel to mitigate corrosion.

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

State forces spot paint areas or portions of and overcoat the entire structure, as needed.

6. What type(s) of coatings are the crews using?

X Calcium Sulfonate

☐ Epoxy Mastic

☐ Urethane Mastic

☐ Acrylic elastomer

☐ Epoxy Amine

☐ Oil Alkyd

☐ Polyaspartic

☐ Other:

Please provide the manufacturer(s) and product name(s) of the coatings.

Watson Coatings, Inc., Armor-Shield AS8301(grey)

7. Application methods use by the crews?

☒ Spray

☒ Roller

☒ Brush

☐ Other:

8. How is the success of the strategy measured?

☒ Anecdotal

☐ Anecdotal with some quantitative results

☐ Quantitative results

☐ Research study

☐ Other:

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

☒ Anecdotal

☐ Field testing

☐ Lab tests

☐ Research study

☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

Based on cost and ease of application and cleanup - Calcium Sulfonate.

11. Additional comments:

MoDOT staff partnered with industry representatives just completed a review our new construction, contract maintenance, and in-house paint programs. A final report with recommendations for improvement will be available the first part of 2009.

SURVEY on MAINTENANCE OF STEEL COATINGS

Name: John E. Buxton

State: Maine

Position: Bridge Maintenance Engineer

E-mail: john.buxton@maine.gov

1. Do state maintenance crews do any painting of steel bridges?

☒ Dedicated crews

☐ Routinely

☐ Occasionally

☐ Infrequently

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

One crew painting about 3 bridges per year, four others painting bearings and beam ends out of 25 bridge crews.

2. About how long have the crews been painting?

☐ Less than 5 years

☒ More than 15 years

☐ Less than 15 years

☐ Dropped the program

☐ Other:

3. What level of preparation does your state crews do before painting?

☐ SP-2

☐ SP-3

☒ SP-6

☐ Other:

Please provide a brief description of the equipment used.

Steel shot recycle and vacuum shrouded power tools.

4. What is the aim or strategy of using state crews for painting steel bridges?

☒ Extend coating service life

☒ Provide some protection between painting contracts

☐ Prompted by repair work in vicinity

☐ Other:

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

As explained above, both full paint and spot painting.

6. What type(s) of coatings are the crews using?

☐ Calcium Sulfonate ☐ Epoxy Mastic ☒ Urethane Mastic

☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd

☐ Polyaspartic ☐ Other:

Please provide the manufacturer(s) and product name(s) of the coatings.

Sherwin William or WasserMoisture Cure Urethane

7. Application methods use by the crews?

☒ Spray

☒ Roller

☒ Brush

☐ Other:

8. How is the success of the strategy measured?

- ☒ Anecdotal ☐ Anecdotal with some quantitative results
☐ Quantitative results ☐ Research study
☐ Other:

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- ☒ Anecdotal ☐ Field testing
☐ Lab tests ☐ Research study
☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

Moisture Cure Urethane

11. Additional comments:

*More Painting is needed by maintenance forces and through contract painting.
The decrease in bridge maintenance crew sizes has limited our ability to paint.*

SURVEY on MAINTENANCE OF STEEL COATINGS

Name ___ Wayne Seger _____

State ___ Tennessee _____

Position ___ Civil Engineering Manager II _____

E-mail ___ wayne.seger@state.tn.us _____

1. Do state maintenance crews do any painting of steel bridges?

- | | |
|--|--|
| <input type="checkbox"/> Dedicated crews | <input type="checkbox"/> Routinely |
| <input type="checkbox"/> Occasionally | <input checked="" type="checkbox"/> Infrequently |

Please provide a brief statement on the percentage of the state forces painting program compared to the total program. Just recently our in-house bridge repair/maintenance personnel have been doing some spot painting of coated bridge steel, especially bearings and near deck expansion joints. I would say that this task is less than 25% of their main assignments but is very important to the preservation of the steel in the bridge. All of the total painting of a bridge is contracted out by low bid.

2. About how long have the crews been painting?

- | | |
|---|--|
| <input checked="" type="checkbox"/> Less than 5 years | <input type="checkbox"/> More than 15 years |
| <input type="checkbox"/> Less than 15 years | <input type="checkbox"/> Dropped the program |
| <input type="checkbox"/> Other: | |

3. What level of preparation does your state crews do before painting?

- | | | |
|--|-------------------------------|-------------------------------|
| <input checked="" type="checkbox"/> SP-2 | <input type="checkbox"/> SP-3 | <input type="checkbox"/> SP-6 |
|--|-------------------------------|-------------------------------|

☐ Other:

Please provide a brief description of the equipment used. Our crew typically use a wire brush (hand or power tool) and scrapers. Rarely will they blast clean. Although in some cases, they have used the abrasive blaster to a poor SP-6 condition.

4. What is the aim or strategy of using state crews for painting steel bridges?

☒ Extend coating service life

☐ Provide some protection between painting contracts

☐ Prompted by repair work in vicinity

☐ Other:

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?
As mentioned in an earlier response, our crews just spot paint.

6. What type(s) of coatings are the crews using?

☐ Calcium Sulfonate ☒ Epoxy Mastic ☐ Urethane Mastic

☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd

☐ Polyaspartic ☒ Other: whatever they have on hand

Please provide the manufacturer(s) and product name(s) of the coatings.

7. Application methods use by the crews?

- ☐ Spray ☐ Roller ☒ Brush
☐ Other:

8. How is the success of the strategy measured?

- ☒ Anecdotal ☐ Anecdotal with some quantitative results
☐ Quantitative results ☐ Research study
☐ Other:

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- ☒ Anecdotal ☐ Field testing
☐ Lab tests ☐ Research study
☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

The calcium sulfonate paint seems to be very forgiving and can be applied easily.
We will also use a rust neutralizer, such as Picklex and other “rust converters” as a first step or at least a primer in trying to do some interim preservation measures.

11. Additional comments:

SURVEY on MAINTENANCE OF STEEL COATINGS

Name Richard M. Shaw

State New Jersey

Position Director, Ops. Support

E-mail RichardM.Shaw@dot.state.nj.us

1. Do state maintenance crews do any painting of steel bridges?

- | | |
|--|--|
| <input type="checkbox"/> Dedicated crews | <input type="checkbox"/> Routinely |
| <input type="checkbox"/> Occasionally | <input checked="" type="checkbox"/> Infrequently |

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

All Bridge Painting on State owned bridges is conducted by contracted forces. No in-house bridge painting is accomplished. Those crews were lost due to attrition in the 1990's and were not replaced.

2. About how long have the crews been painting?

- | | |
|---|---|
| <input type="checkbox"/> Less than 5 years | <input type="checkbox"/> More than 15 years |
| <input type="checkbox"/> Less than 15 years | <input checked="" type="checkbox"/> Dropped the program |

- ☐ Polyaspartic ☐ Other:

Please provide the manufacturer(s) and product name(s) of the coatings.

7. Application methods use by the crews?

- ☐ Spray ☐ Roller ☐ Brush
- ☐ Other:

8. How is the success of the strategy measured?

- ☐ Anecdotal
- ☐ Anecdotal with some quantitative results
- ☐ Quantitative results
- ☐ Research study
- ☐ Other:

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- ☐ Anecdotal
- ☐ Field testing
- ☐ Lab tests
- ☐ Research study
- ☐ Other:

10. If it was your decision, what paint would you recommend for the crews to use?

11. Additional comments:

Due to the fact that we still have bridges with lead based paint, all contractor forces must first conduct lead removal activities. Bridges are near-white blasted cleaned, coated with organic zinc primer, a high-build epoxy intermediate coat, and finished with a urethane coat using approved FHWA paint colors. All SSPC guidelines are followed during the painting process. Contractor crews must be certified, as must inspection personnel.

SURVEY on MAINTENANCE OF STEEL COATINGS

|--|---------------------------------------|
| <input type="checkbox"/> Dedicated crews | <input type="checkbox"/> Routinely |
| <input checked="" type="checkbox"/> Occasionally | <input type="checkbox"/> Infrequently |

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

Less than 5%

2. About how long have the crews been painting?

- | | |
|---|--|
| <input type="checkbox"/> Less than 5 years | <input checked="" type="checkbox"/> More than 15 years |
| <input type="checkbox"/> Less than 15 years | <input type="checkbox"/> Dropped the program |
| <input type="checkbox"/> Other: | |

3. What level of preparation does your state crews do before painting?

- | | | |
|--|--|-------------------------------|
| <input checked="" type="checkbox"/> SP-2 | <input checked="" type="checkbox"/> SP-3 | <input type="checkbox"/> SP-6 |
| <input type="checkbox"/> Other: | | |

Please provide a brief description of the equipment used.

Hand scrapers, needle guns, roto-peen

4. What is the aim or strategy of using state crews for painting steel bridges?

- ☒ Extend coating service life

☒ Provide some protection between painting contracts

☒ Prompted by repair work in vicinity

☐ Other:

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

Spot/repair areas, girder ends – entire bridge by contract

6. What type(s) of coatings are the crews using?

☐ Calcium Sulfonate

☐ Epoxy Mastic

☐ Urethane Mastic

☒ Acrylic elastomer

☐ Epoxy Amine

☐ Oil Alkyd

☐ Polyaspartic

☒ Other: Alum. Filled epoxy mastic

Organic zinc

Please provide the manufacturer(s) and product name(s) of the coatings.

7. Application methods use by the crews?

☒ Spray

☐ Roller

☒ Brush

☐ Other:

8. How is the success of the strategy measured?

☐ Anecdotal

☐ Anecdotal with some quantitative results

☐ Quantitative results

☐ Research study

☒ Other: not really measured

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

☐ Anecdotal

☐ Field testing

☐ Lab tests

☐ Research study

☒ Other: observation by field forces and feedback to State Br. Mgt. Unit

10. If it was your decision, what paint would you recommend for the crews to use?
Organic zinc or Aluminum-filled epoxy mastic primer
Acrylic topcoats

11. Additional comments:

Most of our existing paint systems are red lead primer with aluminum topcoats.
The red lead presents lead abatement issues which have slowed down our repainting efforts.

Painting by bridge crews is essentially to arrest corrosion until contract painting can be arranged.

SURVEY on MAINTENANCE OF STEEL COATINGS

Name Gary Peterson

State Minnesota

Position State Bridge Construction and Maintenance Engineer

E-mail gary.peterson@dot.state.mn.us

1. Do state maintenance crews do any painting of steel bridges?

- | | |
|--|--|
| <input type="checkbox"/> Dedicated crews | <input type="checkbox"/> Routinely |
| <input type="checkbox"/> Occasionally | <input checked="" type="checkbox"/> Infrequently |

Please provide a brief statement on the percentage of the state forces painting program compared to the total program.

Probably about 5% of our contract bridge improvement program.
Currently less than 1% of our maintenance staff work output.
Estimated about 9% of our recommended 2009 statewide PM program.

Partial repainting and full repainting are typically done under contract. We have added a Spot Paint Preventive Maintenance Activity to those already required by maintenance staff this year. Once we have a process defined to remove and store waste products in accordance with EPA regulations we anticipate Bridge Gusset Plates and the ends of bridge beams located under bridge joints will begin targeted for PM this spring.

2. About how long have the crews been painting?

- | | |
|--|---|
| <input checked="" type="checkbox"/> Less than 5 years | <input type="checkbox"/> More than 15 years |
| <input checked="" type="checkbox"/> Less than 15 years | <input checked="" type="checkbox"/> Dropped the program |
| <input type="checkbox"/> Other: | |

Varies from district to district. Most do very little.

3. What level of preparation does your state crews do before painting?

☐ SP-2 ☒ SP-3 ☐ SP-6

☐ Other:

We will require a SP2 or 3 surface prep.

Please provide a brief description of the equipment used.

Hand tools, Hepavac,

4. What is the aim or strategy of using state crews for painting steel bridges?

☒ Extend coating service life

☐ Provide some protection between painting contracts

☐ Prompted by repair work in vicinity

☒ Other: Although paint failure can cause beams to rust, typically section loss occurs first near joints. Our proposed PM is to maintain the paint system under bridge joints and at gusset plates until the rest of the bridge paint system catches up and a full repaint project can be contracted.

5. Are the crews used just for spot painting, girder end areas, or the entire bridge?

Spot painting.

6. What type(s) of coatings are the crews using?

☐ Calcium Sulfonate ☐ Epoxy Mastic ☐ Urethane Mastic

☐ Acrylic elastomer ☐ Epoxy Amine ☐ Oil Alkyd

☐ Polyaspartic ☒ Other: see below

Please provide the manufacturer(s) and product name(s) of the coatings.

Sherwin Williams macropoxy 920 pre-prime and duraplate epoxy paint of equivalent tinted to match color on bridge. Use a Sherwin Williams pro select Stampeed-1 polyurethane sealant or equivalent to caulk seams.

7. Application methods use by the crews?

- ☐ Spray x☐ Roller x☐ Brush
☐ Other:

8. How is the success of the strategy measured?

- ☐ Anecdotal ☐ Anecdotal with some quantitative results
☐ Quantitative results ☐ Research study
X Other:

We have added a Pontis element that to record the paint condition on gusset plates and another for beam ends located under joints.

Please provide documents, links, or references to supporting information.

9. How is the effectiveness of the coatings measured?

- ☐ Anecdotal ☐ Field testing
☐ Lab tests ☐ Research study
X Other:

Time will tell.

10. If it was your decision, what paint would you recommend for the crews to use?

See item 6 above. Because of concerns regarding management of regulated and hazardous wastes, our crews need to limit the amount of paint they remove to maintain the gusset plates and beam ends. Since sand blasting will require containment and will generate larger quantities of waste to manage, I'd like to

begin by limiting work to spot painting areas that are mechanically cleaned if possible but hand cleaned as a minimum preparation. The paint systems listed in question 6 are tolerant of that level of surface preparation.

11. Additional comments:

We hope to have more information next year.

Our experience rating our gusset plates indicates that it is very important that the paint intersection of the chord with the gusset plate be maintained to manage the amount of section loss that would otherwise occur at this location if located within a salt spray zone or near a deck drain outlet. We have noted fairly significant corrosion of gusset plates as we have looked closely at some of our truss bridges.
